

ALIDU ANTHONY

Full-Stack Developer | Computer Science (Information Technology) Undergraduate

PERSONAL DATA

Full Name: Anthony Alidu

City: Abuja (FCT), Nigeria

Email: tonyalidu@gmail.com

Telephone: +234 903 775 1518

GitHub: github.com/Tony-tech-web

Portfolio: my-portfolio-wheat-six-43.vercel.app

X (Twitter): x.com/AliduTony

LinkedIn: Not yet set up

PROFILE

Full-stack developer and Computer Science (Information Technology) undergraduate at Elizade University with hands-on experience designing and building production-style web systems, backend architectures, and Java desktop applications.

Strong focus on structured system design, clean architectural separation (controller–service–data layers), API-driven development, and scalable data handling. Experienced across frontend engineering, backend orchestration, database management, and containerized local environments.

Builds practical, real-world applications; several projects are in progress and available on GitHub.

3. EDUCATION

B.Sc. Computer Science (Information Technology) — Elizade University, Ondo State

In View

- Expected classification: Second Class Upper (2:1)
- Coursework includes: Data Structures & Algorithms, Software Engineering, Database Systems, Computer Architecture, and Object-Oriented Programming.
- Active participant in academic and personal engineering projects throughout the programme.

O'Level Qualifications — WAEC & NECO

Secondary School

- Credits in: Mathematics, English Language, Physics, Data Processing, Computer Studies.

TECHNICAL EXPERTISE

Frontend Architecture

Architecture Style:

Component-driven, state-aware UI architecture

Web Stack:

React

TypeScript / JavaScript

Tailwind CSS

HTML

CMS (Word Press, Drupal, Joomla)

Design Approach:

Functional components

Props/state-based rendering

Separation of UI and data-fetching logic

API-driven UI updates

JSON-based data exchange

Responsive layout systems

Desktop UI Development:

JavaFX (MVC / MVVM patterns)

Strength Level:

Strong project-based frontend engineering with solid structural fundamentals and state management logic (not animation-focused UI work).

Backend Orchestration

Primary Runtimes:

Node.js

Java

Backend Architecture Pattern:

Monolithic service architecture

Controller–Service–Data Access separation

REST-style API design

Structured JSON serialization

Databases & Data Layer:

MongoDB

PostgreSQL

MySQL

Supabase (Postgres + Auth + Storage)

Firebase

ORM & Data Tools:

Prisma

Caching & Performance:

Redis (basic caching strategies and session handling concepts)

External Integrations:

Third-party API consumption

Weather API integration

Authentication workflows

Real-Time Concepts:

WebSockets (conceptual + applied usage level understanding)

DevOps & Infrastructure

Containerization:

Docker (local development, service isolation)

Cloud & Storage:

Cloudflare R2 (object storage)

Firebase & Supabase managed services

Development Workflow:

Local-first development environments

Manual deployment & service configuration

Git-based version control

DevOps Maturity:

Early–Intermediate

(Comfortable with containers and managed cloud services; CI/CD automation not yet implemented.)

Programming Languages:

Proficient:

Java

JavaScript

TypeScript

Python

SQL

HTML & CSS

Assembly (academic level)

JSON (data interchange)

Currently Learning:

PHP(Composer, Laravel Herd)

AI and ML Logic

CORE COMPUTER SCIENCE CONCEPTS

Object-Oriented Programming (OOP)

Data Structures & Algorithms

Tree Traversal

Searching & Sorting

Recursion & Backtracking

Software Design Principles

Debugging & Optimization

API Design

Caching Strategies

Real-time Systems (foundational level)

System Architecture Fundamentals

SELECTED PROJECTS

All active projects are hosted or in progress on GitHub.

Virtual Personal Stylist — JavaFX Desktop Application

Designed and implemented a complete intelligent desktop system for personalized outfit recommendations.

Key Features:

Image-based skin tone detection

Body shape analysis logic

External weather API integration

User preference persistence

Structured MVC-based JavaFX UI

Clean modular architecture

Student Attendance System (QR-Based)

University-scale attendance solution using QR code verification.

Core Implementation:

Student and admin panels

Role-based access control
 QR verification logic
 Database-driven record storage

Order Management System (Nexus)

Full-stack system for managing product orders and inventory.

Key Features:

CRUD operations for orders, products, and users
 Admin and user dashboards
 Inventory tracking and reporting
 REST API-driven backend
 Modular and maintainable architecture

Tikianaly(PRIVATE and under development)

Analytical tool for data-driven insights.

Core Implementation:

Data collection and visualization
 Interactive dashboards
 JSON-based API integrations
 Structured data processing pipelines
 Encrypted Chat App (E2EE)
 Real-time messaging system with end-to-end encryption keys.

Core Implementation:

Secure communication
 User authentication
 Encrypted message storage
 AI Study Assistant
 AI-powered assistant to enhance learning.

Key Features:

Question-answering capabilities
 Study material summarization
 Context-aware recommendations
 External learning resource integration
 Twitter Automation Bot
 Automates tasks on Twitter using APIs.

Core Implementation:

Scheduled posting
 Engagement automation
 Data extraction for analysis

DEVELOPMENT EXPERIENCE

Internships

ICRC (Infrastructure Concession Regulatory Commission)

Assisted in software development projects and system workflows

Compumetrics

Supported backend development and database management tasks

NCC(Nigerian Communications Commission)

Worked as a Technical Support intern and a web developer, and also learned Data analytical skills and Networking Skills with concerns to database development

Software Developer — Academic & Personal Projects

Architect and implement full-stack web applications and structured desktop systems

Design REST APIs with proper controller-service separation

Implement algorithmic problem-solving solutions

Maintain Git-based repositories with structured commits

Work across frontend, backend, and data layers

Mobile development

AI integration into platforms and softwares

TOOLS & ENVIRONMENT

VS Code

IntelliJ IDEA / NetBeans

Git & GitHub

Docker

Figma

Raspberry Pi (Python, GPIO)

Træ IDEs

Antigravity (experimental tooling)

Xampp (Apache, SQL)

CONTINUOUS LEARNING

- Advanced Java & JavaFX
- Advanced Git workflows
- Blockchain fundamentals (Java-based •implementation)
- React architecture deepening
- Node.js backend scaling patterns

- Docker-based service structuring
- Flutter (mobile app development)
- PHP (currently learning)

AVAILABILITY

Open to:

Internships

SIWES placements

Contract projects

engineering collaborations
