Portfolio: my-portfolio-wheat-six-43.vercel.app

PROFILE

Motivated Full-Stack Developer and Computer Science undergraduate at Elizade University, with hands-on experience spanning IT support, backend API engineering, frontend development, hardware systems, and AI-integrated application design. Proven ability to communicate effectively with diverse stakeholders, collaborate within cross-functional technical teams, and deliver reliable solutions under real-world operational constraints. Strong focus on clean system architecture, problem solving, and continuous self-improvement — actively building production-grade software across web, desktop, and cloud environments.

WORK EXPERIENCE

IT Support Staff — User Support — Nigerian Communications Commission (NCC) *Apr 2026 – Present*

- Resolve user complaints and IT support tickets across departments, applying effective communication to manage expectations and deliver timely resolutions.
- Operate within a structured multi-departmental IT environment spanning software development, database administration, networking, cybersecurity, and web services.
- Collaborate cross-functionally with specialists to ensure operational efficiency, demonstrating consistent team collaboration and time management.
- Apply full-stack development and hardware knowledge to support and improve internal systems.

IT Intern — Compumetrics *Jul 2025 – Oct 2025*

- Evaluated and explored multiple software platforms, sharpening analytical and problem-solving skills through structured independent study.
- Studied and compared relational and non-relational database methodologies, strengthening database design and management competencies.
- Gained practical understanding of operational and governance differences between private organisations and government institutions.

IT Support Intern — Infrastructure Concession Regulatory Commission (ICRC) *Jul 2024 – Oct 2024*

- Contributed to hardware troubleshooting involving CPU component diagnosis, disassembly, and repair.
- Installed, configured, and maintained office copiers and printers, ensuring smooth departmental operations.
- Gained hands-on exposure to biometric systems — setup, configuration, and operational workflows.
- Received practical training on server room operations, infrastructure management, and secure IT environment best practices.
- Demonstrated adaptability and initiative by contributing effectively within a professional IT support team.

EDUCATION

B.Sc. Computer Science (Information Technology) — *In View*

Elizade University, Ondo State

Expected classification: Second Class Upper (2:1)

O'Level Qualifications (WAEC & NECO)

Credits in: Mathematics | English Language | Physics | Data Processing | Computer Studies

SELECTED PROJECTS

TikiAnaly Community Backend — Node.js / TypeScript / REST API

2024 – Present

- Designed and developed a production-ready backend REST API using Node.js and TypeScript, following a clean controller–service–data access architecture.
- Authored complete Swagger/OpenAPI documentation covering all community endpoints, integrating swagger-ui-express for interactive API exploration.
- Conducted critical architecture and security reviews, identifying exposed API keys and prescribing immediate remediation procedures.
- Managed version control, branching strategy, and collaborative development workflows using GitHub within a multi-developer team.

Tennis Data Platform — Node.js / TypeScript / REST API / Data Ingestion

2024 – 2025

- Architected and delivered two fully independent production-ready repositories — tennis-data (data ingestion service) and tennis-service (REST API) — as part of the TikiAnaly sports module.
- Designed the complete data ingestion pipeline including schema design, endpoint integration, and error handling strategies.
- Reviewed GoalServe API documentation, identifying schema gaps and integration risks prior to implementation to improve system reliability.

Sports Oracle — Multi-AI Prediction SaaS — React / Vite / Node.js / Claude AI / GPT-4

2025 – Present

- Building a sports prediction SaaS application featuring a multi-AI consensus engine integrating Claude and GPT-4 for evidence-based sports forecasting.
- Implemented self-healing formula versioning to maintain prediction model stability across system updates.
- Developing a React/Vite frontend with a clean, data-driven UI that surfaces real-time AI consensus outputs.

EchoSpace — Academic Collaboration Platform — Full-Stack Web Application

2023 – 2024

- Designed and developed a context-aware messaging platform for academic collaboration, emphasising bandwidth optimisation and temporal collaboration frameworks.
- Produced a full research proposal, grant application, and technical presentation — demonstrating strong documentation and communication skills.
- Implemented structured discussion flows, academic lifecycle management, user authentication, and IoT-based attendance verification concepts.

Virtual Personal Stylist — JavaFX Desktop Application

Academic Project

- Designed and implemented a complete desktop outfit recommendation system using image-based skin tone and body shape analysis logic.
- Integrated external weather APIs for enhanced recommendation accuracy; built a clean JavaFX UI with persistent user preference storage.

Attendance Management System — QR-Based Web System

Academic Project

- Designed a structured attendance solution using QR code verification with role-based access control for users and administrators.
- Focused on scalability, accuracy, and operational reliability within a university environment.

Personal Portfolio Website — HTML / CSS / JavaScript

Personal Project

- Built a responsive portfolio website showcasing projects and technical skills.
- Managed version control and deployment pipeline using Git and GitHub.

Raspberry Pi Automation — Python / GPIO

200 Level — Personal Project

- Wrote and deployed a Python script to interface with and operate a Raspberry Pi via GPIO, gaining practical embedded systems and IoT experience.
-

TECH STACK

Languages: Java, JavaScript, TypeScript, Python, SQL, Assembly (Academic)

Frontend:

- Frameworks & Libraries: React, Tailwind CSS, JavaFX (MVC / MVVM patterns)
- Architecture: Component-driven, state-aware UI — functional components, props/state-based rendering, clean separation of UI and data-fetching logic
- Workflow: Responsive layouts, API-driven UI updates, JSON-based data exchange
- Strength: Practical project-based frontend — strong fundamentals with real engineering exposure

Backend & Runtime:

- Runtimes: Node.js, Java
- Patterns: Monolithic service architecture, Controller-Service-Data Access separation
- APIs: REST-style APIs, JSON serialisation, external API consumption, WebSockets (conceptual and usage-level)

Databases & Storage:

- Relational: PostgreSQL, MySQL
- NoSQL / BaaS: MongoDB, Firebase, Supabase
- Caching: Redis
- Object Storage: Cloudflare R2
- ORM: Prisma

DevOps & Infrastructure:

- Containerisation: Docker (local isolation, service separation)
- Platforms: Firebase, Supabase managed services, Cloudflare R2
- Version Control: Git, GitHub — branching, structured commits, and versioning

AI & ML: Applied AI/ML concepts, model usage and integration (Claude, GPT-4), multi-AI consensus system design

Tools & IDEs: VS Code, IntelliJ IDEA / NetBeans, Trae IDE, GitHub, Docker, Figma, Swagger/OpenAPI

Hardware: CPU component diagnosis & repair, printer/copier installation, biometric systems, server room operations, Raspberry Pi (Python/GPIO)

Core Concepts: OOP, Data Structures & Algorithms, MVC/MVVM, Software Design, Debugging, Authentication Workflows, API Design

CORE COMPETENCIES

✓ Effective Communication Time Management	✓ Problem Solving	✓ Team Collaboration	✓
--	-------------------	----------------------	---

CONTINUOUS LEARNING

- Advanced Java & JavaFX — MVC/MVVM patterns and desktop application architecture
- Git & GitHub — branching strategies, structured versioning, and collaborative workflows
- Blockchain fundamentals — Java-based decentralised application concepts
- Expanding proficiency in React, Docker, Flutter, and cloud infrastructure
- AI-integrated application development — multi-AI consensus engines and intelligent backend design

AVAILABILITY

Open to internships, contract projects, graduate roles, SIWES placements, and professional collaborations. Available immediately.

NYSC: *Not yet commenced (expected upon graduation).*
